Open-Ended Project

Joaquin Leiva | CSE 210 - Programming with Classes

I chose the make a version, simple of the crossword game with a hanging character. This game will be developed by using Abstraction, Inheritance, Encapsulation and Polymorphism principles.

The user would be able to chose words from 3 different topics: stars (famous soccer people), soccer teams (famous soccer teams) and actors (actor and actresses famous). Also, there is an option to pick words randomly from a file, with 10 words by each letter, all of them randomly picked.
